"The evening and morning was the first day." The day starts at sum set. Gen. 1:5, Lev. 23:32 (Lunar-Solar-Days "1 New Moon Day-8-15-22-29" are the Sabbath days each Month). Abib $1^{\mathbb{8}}$ (Mar. $30^{\star}$ ) is the beginning

 $\left(O c t .7^{\text {th }}\right)$, Latt Great Day the $22^{\text {nd }}\left(O c t .14^{\text {th }}\right)$. The blue boxes are Weekly Sabbaths. The gray boxes are the day between Sabbath and New Moon day because of when the conjunction occurs. The yellow boxes are the first day of each month, New Moon days. All green boxes are Feast Days. This year three annual Sabbaths occur on Weekly Sabbaths: $I^{t}$ day Unleavened Bread, $I^{y}$ day of Feast of Tabernacles, Last Great Day. There are three Feast days that are not on a Weekly Sabbaths: Last Day of Unleavened Bread, Feast of Weeks and Atonement. Feast ofTrumpets occurs on a New Moon day. The way to know when a new month starts is to see the last crescent in the morning of the $29^{\text {h }}$ of the month. If the crescent is seen on the $29^{\text {hh }}$ day, conjunction will take place some time during the next day ( 24 hrs sunset to sunset.) If we do not see the last crescent in the morning of the $29^{\text {th }}$ we know the last crescent occurred on the $28^{\text {th }}$, therefore we know that conjunction is occurring or has just occurred, the new moon (month) will start that day at sunset. 1 ${ }^{\text {st }}$ Samuel 20:1-42. When Yahushua returns the Torah (Law) will go forth out of Zion. By Warren G. Smith
